

# Grower Profile

Name: Mark Anseeuw  
Location: Oak Bluff, MB  
Acres Farmed: 3400

First year growing soybeans:  
(include number of acres)  
180 Acres - 2003

Current year:  
(include number of acres)  
700 Acres - 2010

## Comments:

On soybeans as a crop;

I've been growing soybeans for 7 years now and they fit into the rotation anywhere, which is important. Overall cost of production is lower plus you have the bonus of spreading out your harvest. We have also learned, especially this year, that we can grow and harvest soybeans in pretty adverse situations. You can't do that with every crop.

On NSGM seed varieties;

You can expect NorthStar Genetics Manitoba to have varieties that are suited to your geography because they have a number of trials in your area with multiple varieties. The quality of the seed is good and maturity and harvestability are strong attributes within their team of varieties. They have strong dealers who are well setup to treat soybeans and support you through the growing season.
